Submission Requirements

Your submission for this practical will be made through Canvas by submitting the URL (link) to your GitHub or GitLab repository.

Before submitting your work, you must complete all of the following steps:

1. Create a Blank Repository
    - Go to GitHub or GitLab and create a new, blank repository.
    - Name the repository exactly using this format: `[Student ID]-Practical5`
    - Important: Do not initialize the repository with a README, `.gitignore`, or license file. It must be completely blank so your local Android Studio project can be pushed to it cleanly.

2. Set Repository Visibility to `Public`
    - Set the repository's access/visibility level to `Public`.
    - Your repository must be publicly accessible so that it can be viewed and assessed using the URL you submit. Do not make the repository `Private`.

3. Link Android Studio Immediately
    - Immediately after creating the blank `PracticalFive` project in Android Studio, initialize Git and link it to your new online repository.
    - *(Reminder from lecture: Ensure you are in the "Project" view, check your `.gitignore` file, and use Android Studio's built-in Git tools to Add, Commit, and Push your initial project setup).*

4. Commit and Push Incrementally
    - You must practice proper version control throughout the development of this practical.
    - With each addition of a feature or modification to the app (e.g., adding resources, creating the `TextProcessor` class, implementing the explicit intent, styling the second activity, adding the implicit intent), you must perform a commit and push.
    - Every commit must have an informative and descriptive message (e.g., *`"Added string array resources for municipality histories" or "Implemented implicit intent for Share button"`*). Avoid vague messages like *`"update"`*, *`"stuff"`*, *`"fixed"`*, or *`"final"`*.
    - Requirement: Your final submitted repository must contain at least 8 distinct commits demonstrating steady, meaningful progress.

5. Submit the URL on Canvas
    - Copy the HTTPS URL of your public GitHub/GitLab repository.
    - Paste this URL into the designated Practical 5 submission link on Canvas.
